AF541

Save time and money with our pre-assembled AF541 ventilation mask

Now the Philips Respironics AF541 noninvasive ventilation (NIV) mask comes pre-assembled with an under-the-nose (UTN) cushion. With the mask frame, elbow and cushion shipped together, you save both time and money.

Enhanced comfort for patients. Enhanced ease for clinicians.

The pre-assembled Philips Respironics AF541 NIV mask with UTN cushion provides convenience, comfort and peace of mind to your patients with a variety of innovative features.

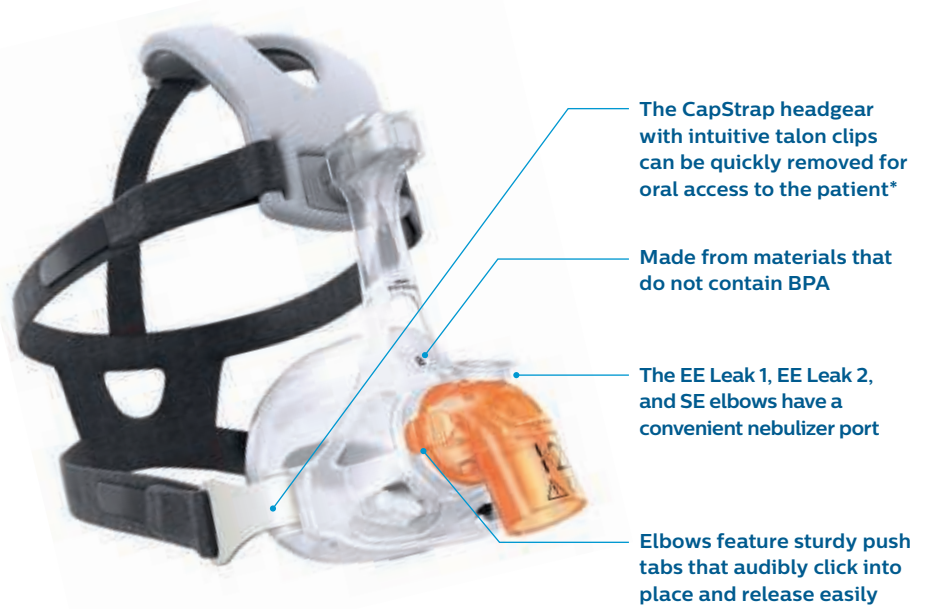

- **Mask rotation** – By regularly rotating between masks, you can offload and redistribute pressure, reducing the potential for skin breakdown.
- **Flexibility** – There's no need to remove or reconfigure the mask to provide oral care. It can easily be lifted off face or rotated and locked to provide a drink of water or wash the face.
- **Enhanced comfort** – The mask does not touch the bridge of the nose, so patients are able to wear their glasses. Plus, the mask sits under the nares for enhanced comfort.
- **Better fit** – The UTN cushion now comes in an extra-small size to fit petite faces.
- **Light weight** – Using state-of-the-art materials, the new AF541 CapStrap headgear is redesigned to be lighter than the AF531 CapStrap headgear.
- **Interchangeability** – Our mask frame works with both 4-point and CapStrap headgear.
- **Convenient storage** – At the bedside you can attach the Clean Clip to the ventilator rollstand providing a convenient spot to store the mask while the patient isn't using it.
- **Supports HAI protocols** – The Clean Clip system supports your infection control efforts.

Mask rotation

By **regularly rotating between masks**, you can offload and redistribute pressure, reducing the potential for skin breakdown.

Philips Respironics AF541 noninvasive ventilation mask

Customize your Philips Respironics AF541 NIV mask with these accessories:
