Achieving the right fit

**Fitting the over-the-nose cushion with CapStrap headgear**

1. Use the sizing guide to identify the correct over-the-nose cushion
2. Assemble cushion onto mask frame, attach to the CapStrap, and place on top of the patient’s head
3. Bring mask down to cover the patient’s nose and mouth
4. Attach the talon clips to the mask

- With patient mouth slightly open, line up the crease between the lip and the chin to define the right size
- Tilt the mask away from the face to position headgear on the crown of the head
- Press and hold the forehead adjuster button to slide the frame toward/away from the face to manage leaks and maximize comfort
- Facing the patient, adjust both top headgear straps at the same time
- Repeat with bottom straps
- Then adjust crown strap at the back

**Mask rotation**

By regularly rotating between masks, you can offload and redistribute pressure, reducing the potential for skin breakdown.

**Fitting the under-the-nose cushion with CapStrap headgear**

1. Grasp the sides of the over-the-nose cushion
2. Use the sizing gauge to identify the correct under-the-nose cushion
3. Hold sides of under-the-nose cushion and push it onto the mask frame
4. Remember that the bottom of the cushion should rest just above the chin with the mouth slightly open

- Remove it from mask frame
- Place it in its Clean Clip Shell for future use
- Follow steps 3 – 4 above to fit the under-the-nose cushion
- The cushion should rest under the patient’s nose (never over the patient’s nose)

Please contact your Philips sales representative for more information.

Available sizes: over-the-nose (S, M, L, XL); under-the-nose (A, B, C)
